

NumuOA work

Nsk calculation for comparizon

A.Murakami

Comparison Item

- Comparison Item
 - Nsk with “Nominal MC” (not “BANFF pre-fit”, just nominal SKMC)
 - Nsk with BANFF post-fit center value
 - 1 sigma effect for each systematics (ΔN_{sk})
- Compare for each flavor, each interaction
- Neutrino oscillation : 3 flavor oscillation prob Prob3++
- Comparison not only in NumuOA analyzer ,but also with T2K-SK number (\rightarrow next page)
- At first, Nsk comparison between Murakami's and T2K-SK's
- Then the some numbers for comparison in NumuOA analyzer are shown

T2K-SK calculation

- Nsk are calculated by T2K-SK experts for NumuOA with several conditions !
(Thanks for Roger-san and Tobayama-san)
- To compare, I pick up the Nsk with the following condition
 - Oscillation probability : 3 flavor by using Prob3++
 - Oscillation parameters are same as TN118
 - Use no BANFF (=”nominal SKMC applied flux tuning”) and BANFF v5 (post-fit)
 - Flux tuning is done by using latest flux (l1bv3.l run1+2+3 fulldata)
 - Do BANFF weighting each entry of SKMC by using T2KReWeight (v1r15pl)
 - BANFF input : **postfit_banff_v5_osc_marg_POTextrap.root**
- The detail numbers are put on here (in this slide, I show the all flavor numbers)
 - <http://www.t2k.org/asg/oagroup/numu/t2k-sk-nsk-for-comparison/>

Murakami calculation

- SKMC IIc after 10a Numu cut & data reduction
 - smallnt_numu_skIIc_flxIIbv3Ifine_rI-3cfull_10acut.root
 - POT for normalization : 3.01E+20
 - Weighted by latest flux (IIb v3.1)
 - sk_tunedIIbv3.1_Ilanom_runI-run3c_full_fine.root
- Neutrino oscillation probability : Prob3++
 - Consider only disappearance for CC interaction neutrino.
 - For the NC interaction neutrino, not consider oscillation
- BANFF : postfit_banff_v5_osc_marg_numu.root
 - not including high energy norm → Now calc by including version.
- Response function estimated with T2KReWeight (v1r15p1)
- Interaction categories → back up

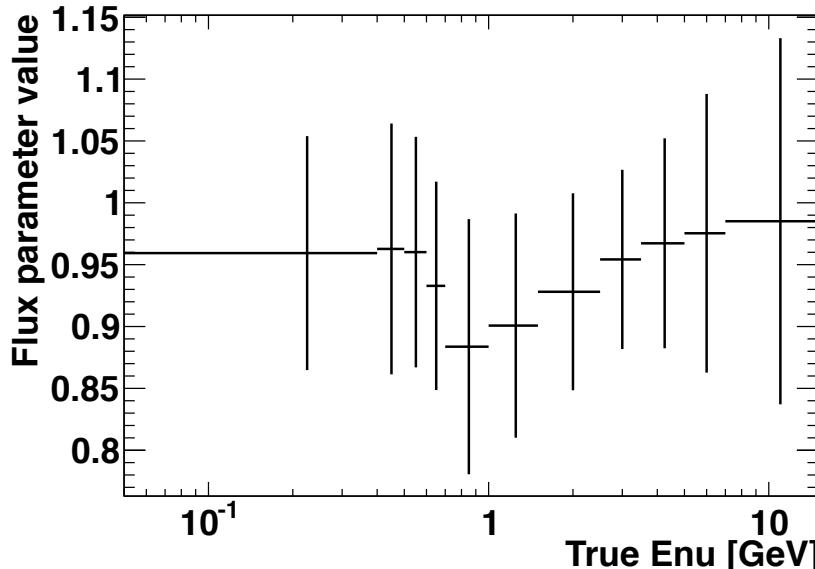

Used oscillation params

Parameter	Value
Δm_{21}^2	$7.6 \times 10^{-5} \text{ eV}^2$
Δm_{32}^2	$2.4 \times 10^{-3} \text{ eV}^2$
$\sin^2 2\theta_{12}$	0.8704
$\sin^2 2\theta_{23}$	1.0
$\sin^2 2\theta_{13}$	0.1 (or 0)
δ_{CP}	0
Mass hierarchy	Normal
ν travel length	295 km
Earth density	2.6 g/cm ³

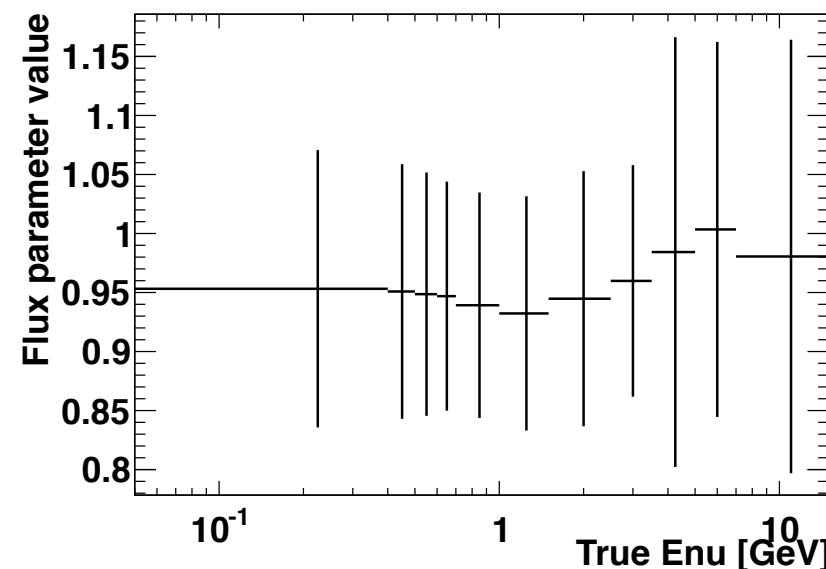

BANFF flux systematics (NumuOA)

Total	5.744E+01	5.754E+01	-1.7E-03

Summary of T2K-SK comparison

- Check the Nsk between T2K-SK experts and Murakami
 - There is no big difference. It seems to be same
 - Looking at Nsk of all flavors&interactions, the difference is 0.018% (at nominal MC), 0.17 % (BANFF v5)
 - For BANFF case, this difference may occur because Murakami not use NCPI0 norma and use spline for BANFF weighting.
 - Anyway, need investigate my calculation to check this diff. But, this diff may not urgent problem for me.

Comparison in NumuOA analyzer

- Nsk with nominal MC or BANFF post
- 1sigma effect for each syst params

Nsk with nominal MC or BANFF post

- Nominal : Nominal SKMC (not use BANFF weighting)
- BANFF center : BANFF fit center
- BANFF + 1 σ : BANFF fit center + 1 σ error
- BANFF - 1 σ : BANFF fit center - 1 σ error

Component

- Nsk : # of expected events
- Frac (%) : Fraction of this component in all

For all sys
